

# Your passengers need reliable information. And we'll make sure they get it. Always.

In 1970, digital displays replaced static, printed destination signs on the front of buses — a dramatic change that saved transit companies a great deal of time and money. But it didn't stop there. In 1980, those digital displays became remotely programmable, enabling quick destination updates whenever necessary.

And in 1999, Luminator's Horizon 100% LED system was introduced, quickly becoming the transit industry's sign of choice. Luminator was there then, and we're still here now, helping ensure that passengers can travel confidently, and transit companies can maximize their quality of service.

Sincerely,  
**Luminator Technology Group.**

INTELLIGENCE,  
SAFETY AND  
EFFICIENCY IN
